1. Configuration files for loading Elasticsearch objects, such as templates, dataviews, watchers,lifecycle managmenet, etc. must use the naming convention: ><common-name>.<object-type>.json

   Where:
   1. <common-name> is the common name of a set of interrelated objects (e.g. templates and dataview) 2. <object-type> is the name of the type of Elasticsearch (or Kibana) object to be created 3. A '.' is used to seperate the <common-name> from the <object-type> 1.
